EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 1, line 11, deleted "emit (940)" and inserted ---emit---.

Remarks

The changes above have been provided to improve the clarification of the claim language. Since the changes is minor and is intended merely to improve the legibility of the claim, obtaining authorization from applicant was not viewed as necessary.

Allowable Subject Matter

2. Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowance:

Prior art does not teach that, the first pulse width modulated drive signal having one of a first waveform and a second waveform for applying the first average lamp power to the lamp, the first waveform including at least one pulse representative of a first data bit, the second waveform including at least one pulse representative of a second data bit; and operating the lamp to emit a first modulated light output in response to a reception of the first pulse width modulated drive signal during the first data period, the first modulated light output being representative of the first data bit in

response to the first pulse width modulated drive signal having the first waveform, the first modulated light output being representative of the second data bit in response to the first pulse width modulated drive signal having the second waveform in combination with all limitations recited in dependent claims 1, 6.

Prior art does not teach that, a computer readable code to generate and communicate a first pulse width modulated drive signal to said lamp during the first data period, the first pulse width modulated drive signal having one of a first waveform and a second waveform for applying the first average lamp power to the lamp, the first waveform including at least one pulse representative of a first data bit, the second waveform including at least one pulse representative of a second data bit; wherein said lamp is operable to emit a first modulated light output in response to a reception of the first pulse width modulated drive signal during the first data period, the first modulated light output being representative of the first data bit in response to the first pulse width modulated drive signal having the first waveform, the first modulated light output being representative of the second data bit in response to the first pulse width modulated drive signal having the second waveform in combination with all limitations recited in independent claim 11.

The remaining dependent claims 2-5, 7-10, 12-15 are allowable for at least above reason.

Prior art made of record and not relied upon is considered pertinent to applicant's disclosure. None of record prior arts stands alone or combination with the others discloses all limitations required in claim invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of relevant prior art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art Sheoghong (U.S. Patent No. 6,639,368) discloses a programmable PWM module for controlling a ballast.

Prior art Shen (U.S. Patent No. 6,498,441) discloses a method for coloring mixing of HID lamps operated at VHF frequencies using duty cycle modulation.

Prior art Li et al. (U.S. Patent No. 6, 388,398) discloses mixed mode control for ballast circuit.

Prior art Bangerter (U.S Patent No: 6, 191, 563) discloses an energy saving power control.
